ABSTRACT

The advent of blockchain technology and digital assets is changing the way we conduct business and manage transactions.

This paper introduces and outlines the key features of the PAWZ utility token cryptocurrency, including the rationale behind the design choices. PAWZ utility token is based on the Binance Smart Chain (BSC) functionality built-in, as well as adding features such as smart contract that allow using PAWZ coin to make regular and immediate donations, funded exclusively by donors, to any global charity network of their choice.

Some care has also been taken to explain several core concept and technologies ubiquitous to cryptocurrencies so that this paper can serve as a self-contained guide to PAWZ coin even for readers not familiar with cryptocurrency in general. PAWZ is leveraging blockchain technology's transparency and immutability to create a unique solution for charities and donors in the financial industry.

With PAWZ, charity donors can access a seamless donation experience on its trusted exchange, and charity organizations can get funded seamlessly, thereby creating a win-win situation for everyone within the platform.

INTRODUCTION

In view of the revolutionary technologies in the emerging field of cryptocurrency, entrepreneurs are building blockchains, launching smart contracts, developing distributed autonomous organizations, re-imagining digital privacy, re-designing the architecture of the internet, and broadly finding ways to make centralized systems more distributed.

The PAWZ token was initiated by Animal Adoption Advocacy, and the token number is 100,000,000. PAWZ. PAWZ will make use of the Binance Smart Chain.

for the management of the centralized repository. Exchanges are one of the first and most common services that appeared in the cryptocurrency industry and are the biggest in terms of the number of companies and employees employed.

PAWZ is the BEP20 coin that aims to become the preferred method to donate transparently through the Binance Smart Chain (BSC) and to access the ecosystem of services provided by the PAWZ platform. The adoption of cryptocurrencies will impact the way we donate in the future, and PAWZ is poised to play a leading role in this new era of fundraising.

PAWZ App is a platform that connects animal shelters, conservation, and charity communities while providing full transparency and traceability of donations through an easy-to-use interface. PAW's services include:

It has a built-in wallet to store and donate easily.

The ability to adopt and "own" rare, endangered species through NFT's means of payment for brick and mortar stores (Pet-Smart) or online (Chewy).

Tools to connect donors with all animal charity organizations to accept donations for the protection of animals.

Additionally, PAWZ is a cryptocurrency method of payment that allows animal shelters, conservation groups, and charities registered on the PAWZ platform to accept donations directly on their website, which are then instantly converted into PAWZ coin. This is to assist donors to differentiate between legitimate and fraudulent charities.

The PAWZ platform and PAWZ coin were conceived and developed by Animals Adoption Advocacy, a group of individuals passionate about endangered and domestic animals. Since its inception, PAWZ's team has worked with many charity organizations. Animal Adoption Advocacy's core competency is the ability to forge high-level partnerships between charities and donors.

Animal Adoption Advocacy has developed an ecosystem of charities and donors that will be key to facilitating the immediate use of the PAWZ token.

The platform is based on BSC, wholly decentralized, and governed by a dedicated system of smart contracts that promotes security and transparency. The use of a private and consensual-based blockchain environment increases the security standards used in the overall solution. We offer users to try the PAWZ Platform, which utilizes smart contracts that allow a user's

money to stay safely in their exchange accounts.

The token can be purchased directly from <https://PAWZcrypto.com/>

The new decentralized technology known as Blockchain enables a new class of services with smart, interact technology, enabling businesses to enhance their productivity and their online security.

CRYPTOCURRENCY MARKET

Cryptocurrencies are systems that allow secure online payments that are denominated as virtual "tokens," defined by internal system ledger entries. "Crypto" refers to the various encryption algorithms and cryptographic techniques that safeguard these entries, such as elliptical curve encryption, public-private key pairs, and hashing functions. The market for cryptocurrency is growing, and on March 30, 2021, its market capitalization was valued at US \$1,859,506,384,332 (1.859 Trillion).

At some point after the launch of Bitcoin in January 2009, thousands of cryptocurrencies existed, and today there are hundreds of cryptocurrencies exchanged with a market value.

Still, Bitcoin represents the undoubted king of approx. 59.2% of the overall capitalization of the sector. According to the latest report by Statista, the total number of unique active users of cryptocurrency wallets is valued at over 100 million, Although, it is almost impossible to know

precisely how many people use cryptocurrency, data shows at least 100 million wallets have been created, and estimates suggest there are 64 million active users using data currently available.

“ TODAY, between 2.9 MILLION AND 64 MILLION PEOPLE ”

A multitude of projects and companies have emerged to provide goods and services that make it easier for regular users to use cryptocurrencies and develop the infrastructure for applications running on top of public blockchains.

While the cryptocurrency industry is composed of many important actors and groups, there are six key cryptocurrency industry sectors today:

Transactions

Cryptocurrency exchanges are platforms that enable the exchanging of cryptocurrencies for other assets, including digital and fiat currencies.

In essence, cryptocurrency exchanges act as intermediaries between a buyer and a seller and make money through commissions and transaction fees.

Coin purses

Cryptocurrency wallets offer users a digital solution for storing and managing blockchain assets and cryptocurrencies in a secure manner. Users can invest, receive, and exchange cryptocurrencies using these wallets. Although some cryptocurrency wallets only support one cryptocurrency, many are multi-asset solutions that allow users to carry multiple cryptocurrencies such as Bitcoin, Bitcoin Cash, Ethereum, and Litecoin, among others. These solutions use secure passwords to ensure that only the owner of cryptocurrencies and blockchain assets has access to the funds. Smartphones and computers can be used to view and access cryptocurrency wallets.

Payment Service Providers

When a customer pays with a cryptocurrency, the transaction usually goes through a payment gateway at a set exchange

rate and is instantly converted to a traditionally accepted fiat currency, which allows the merchant to bypass the volatility of the cryptocurrency markets. Some cryptocurrency payment gateways, on the other hand, do not convert cryptocurrency to fiat currency immediately, enabling the merchant to hold the digital coins for as long as they want, usually in a cryptocurrency wallet.

Mining

Cryptocurrency mining is the process of verifying and adding transactions between users to the blockchain public ledger. Mining is also responsible for adding new coins to the existing circulating supply, and it is one of the key components that enables cryptocurrencies to act as a peer-to-peer decentralized network without the need for a central authority.

DEFI is an abbreviation for Define

DeFi is a blockchain-based type of finance that uses smart contracts on blockchains,

the most common of which is Ethereum, to deliver conventional financial instruments rather than relying on central financial intermediaries such as brokerages, exchanges, or banks. People may use DeFi platforms to lend or borrow money from others, trade cryptocurrencies, insure against threats, and earn interest in savings-like accounts.

NFT

NFTs, or non-fungible tokens, are cryptographic assets on the blockchain that have specific identification codes and metadata that differentiate them from one another. They cannot be traded or exchanged for equivalent value, unlike cryptocurrencies. This is in contrast to fungible tokens, such as cryptocurrencies, which are similar to one another and can therefore be used as a medium for commercial transactions.

BLOCKCHAIN TECHNOLOGY IN THE PROJECT

Blockchains are so resistant to tampering and fraud, and this will be the hallmark of the PAWZ platform. The information stored on a blockchain is stored in groups called "blocks," and each block is time-stamped and linked to the one generated before it in time, creating a linear chain of blocks—hence the term "blockchain."

- ✓ PAWZ will use the Binance chain for the management of the platform. While Blockchain technology is a breakthrough for digital recordkeeping in the form of ledger-based transactions, not all Blockchain offerings in the market are the same.
- ✓ PAWZ takes crowdfunding to new heights by helping charity donors detect fraudulent charity organizations through a centralized platform that guarantees the authenticity of the organizations.
- ✓ With PAWZ, everyone can donate to a specific cause in the PAWZ way.

- ✓ The platform is based on the Binance Blockchain and is wholly decentralized and governed by a dedicated system of smart contracts that promotes security and transparency.

CHARITY INDUSTRY OVERVIEW

In 2019, charitable giving in the United States totaled \$449.64 billion, a 4.2 percent increase in current dollars over 2018, making it one of the highest years ever for charitable giving. Total giving in 2017, 2018, and 2019 represent the three highest levels on record.

Giving by corporations increased by 13.4% in current dollars from 2018 to 2019, followed by giving by individuals (4.7%) and giving by foundations (2.5%). Giving by bequest remained flat at 0.2 percent.

As compared to previous years, foundations and bequests accounted for a greater share of overall giving in 2019. This change was helped by an aging population, increasing wealth disparity, and the development of new foundations—all while giving from donor-advised funds increased.

Person giving accounted for 69 percent of total giving in 2019, the second year in a row that it has fallen below 70%. This percentage has been decreasing gradually over time. In 2019, the percentage of corporate giving remained relatively stable.

Contributions in 2019 total \$449.64 billion, broken down by source. (in billions of dollars—all figures are rounded)

From 2017 to 2019, all subsectors saw positive two-year progress, with the arts, environment, and education showing the most improvement.

High-net-worth individuals support arts and education causes, and environmental causes have become more important to donors in recent years.

CURRENT INDUSTRY CHALLENGES

The nonprofit sector today is worth an estimated \$2 trillion worldwide.

Yet, headlines in recent times have seen the sector stumble between corruption scandals, gross inefficiencies, false expenses, and misuse of funds. When donating to animal shelters, conservation groups, and

With more funds being distributed to charity organizations, there are more chances for fraudulent charities to entice unsuspecting donors with false promises.

There has been an increase in cases of

fraudulent charities over the years.

A typical example was the case of a Georgia fraudster who cloned a real charity on paper when, in reality, it was meant to scam unsuspecting donors.

Within four years, close to \$700,000 was re-

ceived without going to any charitable organizations, but instead went to his own pockets.

The continuous decline in trust on the part of charity donors is justifiable: according to Essential Research, 35% of US citizens have little or no trust in charitable organizations. Similarly, in the UK, figures are not appealing, with trust in charities falling from 6.7 out of 10 in 2014 to 5.7 in 2015, with 33% of those polled explaining that

charities, the overwhelming number of options makes it difficult for individuals to select a cause they wish to support. To complicate things further, some charities can be frauds in which they take the donations of unsuspecting individuals.

Instead of the donor's money going to their preferred charity, it goes to the scammer's pockets. Over the years, the amount donated to charitable organizations has more than doubled. This is expected to increase continuously over time.

the primary reason for their reduction in donations stemmed from the impact of recent scandals on charities' reputations. Naturally, the consequences of donations decreasing are alarming; in the US, 52% of charities are not adequately funded and cannot match the distressing increase in demand for their services.

Unsurprisingly, donors' trust in charities has been declining steadily. In a recent poll, more than a third of those interviewed said they did not trust charities and nonprofits. Donors are demanding more accountability and transparency from charitable organizations.

As part of the challenges regarding transparency, technology plays a vital role in how charities can adapt to the public and their donors' needs.

However, with rapid expansion comes new problems and challenges, which PAWZ intends to address in its initial launch.

- ✓ Low income generation for charitable organizations
- ✓ Lack of trust and transparency
- ✓ Concerns about security

PAWZ SOLUTION

PAWZ strives to provide the world with an easy-to-use, functional, and meaningful cryptocurrency. A cryptocurrency for charity donation. A coin that can reach across borders and barriers to quickly and securely provide support where it is needed most.

Given recent scandals, it is understandable that society has grown skeptical towards the nonprofit sector. However, the PAWZ coin has the potential to transform the industry. By developing a centralized smartphone hub for animal shelters, conservation, and charities, the process of donating would make it simpler for the individual as it filters out their preferred cause. Multiple checks would also be done if the cause is legitimate.

Charities could greatly benefit from blockchain technology in order to provide increased transparency and traceability of donations. Although the benefits of transparency and the potential of cryptocurrency are clear, donors are poorly positioned to embark on new blockchain-led technology initiatives since they are focused on their core business: helping the recipients of charity donations.

At PAWZ, our ultimate goal is to help streamline donations towards animal shelters, conservation, and charities through a centralized platform that guarantees the organizations' authenticity. By doing so, we hope to increase the amount donated.

In order to avoid elements of risk involved in charitable donations, we will verify the authenticity of all charitable organizations.

Both donors and charity organizations will gain the following benefits from using the PAWZ platform:

Lower costs: With traditional donations, money goes through various middlemen, such as government agencies and financial institutions, and high fees are charged by credit or debit card without the ability to help verify the charity platform's authenticity. Blockchain donations are executed directly, reaching the charity instantaneously and at a fraction of the cost.

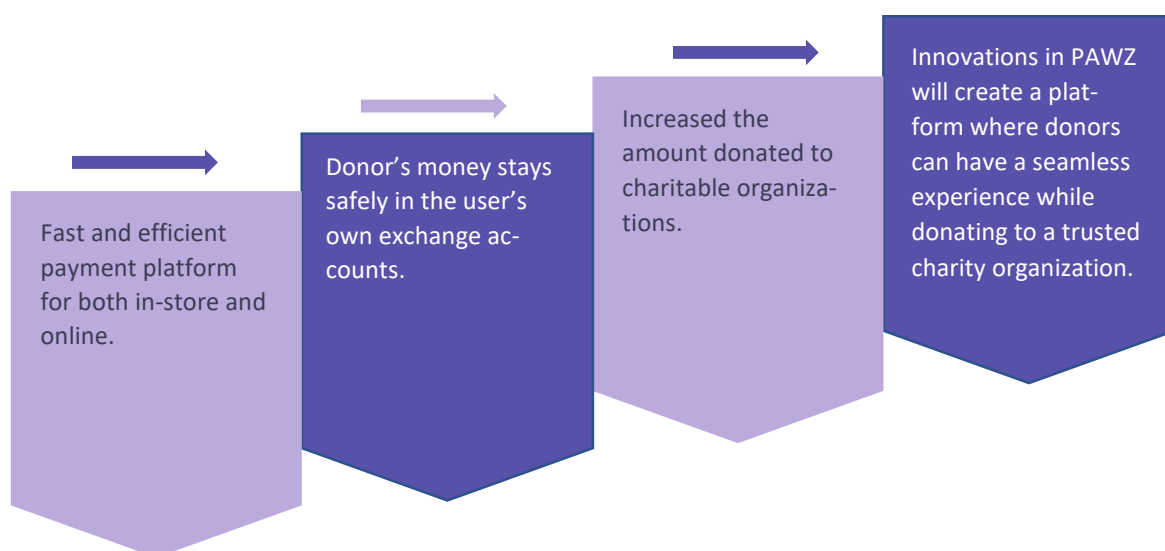

If specific KPIs or other predetermined conditions aren't fulfilled, smart contracts allow donors to redirect them towards more deserving causes

Security: When it comes to getting money from strangers, privacy is key. And with fraud and embezzlement being such significant issues at nonprofits across the country, it's vital to seek donor trust when seeking donor dollars. PAWZ helps create processes and systems that prevent data breaches. This involves the use of technologies that adhere to the highest security standards. By having an easy-to-use cryptocurrency, PAWZ limits the possibility of people and organizations deceiving the public and their donors.

Reward: Users will have access to a reward system being developed for donors of all levels.

We plan to deliver ongoing enhancements to the PAWZ platform with a proven algorithm to stay ahead in innovation and technology while at the same time being creative, allowing better work quality and ease of donation experience. PAWZ comes up with new solutions to address the challenges and problems of exponential growth coupled with

charity donation experience.

PAWZ will build a new stress-free network ecosystem while providing increased donation opportunities, eliminating fraudulent charity platforms.

THE PAWZ PLATFORM'S OPERATION

Here is an overview of our platform working process.

Alice decides that she wants to donate to a specific cause. After looking at numerous causes, she is dumbfounded at which causes are legitimate and which are fraudulent. Her friend tells her about PAWZ, an app that simplifies the donation process. She installs the app and is prompted to connect a cryptocurrency wallet. Alice does not have a cryptocur-

rency wallet. She is redirected to MetaMask, Trustwallet, or other alternatives. After making a wallet, she is able to search for her preferred cause, World Wide Fund for Nature, under the donation tab. She specifies the amount and presses send.

Receiver:

Scenario 1: The World Wide Fund for Nature has a wallet connected to the PAWZ application. The World Wide Fund for Nature would directly receive Alice's dona-

tion, completely eliminating the middleman.

Scenario 2: The World Wide Fund for Nature does not have a wallet connected to the PAWZ smartphone application. PAWZ

will proceed to make a temporary wallet for the World Wide Fund for Nature. After a specified time, a representative will manually withdraw all donations sent to the wallet address and personally donate to the World Wide Fund for Nature.

APPLICATION FOR PAWZ.

1

Gaming NFTs and character upgrades. This allows users to be more involved in their gaming and have increased levels of customization.

Payment for Brick & Mortar stores (Pet-Smart) or Online (Chewy) (PAWZ) would be an excellent way to make payments that are both effective and efficient. Donation to animal shelters, conservation, and charitable organizations Our goal is to allow this cryptocurrency to be one of the standard methods of payment that animal charity organizations accept as donations for the protection of animals.

2

3

AWARENESS about animal rights, biodiversity, and poaching The more people use this coin, the more they may become more aware of animal rights, biodiversity, and protecting wildlife from poachers.

Adopt and "Own" rare, endangered species There are a bit over 78 Amur Leopards left. Through the purchase of NFTs, we aim to allow people to adopt and "own" these animals in a safe, eco-friendly manner.

4

Since the 1980s, the term "poaching" has also been used to refer to the illegal harvesting of different animal species. Every year, poachers take more than 38 million animals from the wilds of the USA to meet the global demand for illegal wildlife. Also, thousands of individuals are arrested for poaching in the United States each year. Experts believe that only one to five percent of poachers are apprehended.

Poaching is a global problem and a focused effort is required to combat it, even when it's not in the headlines. And that's what we're committed to doing. PAWZ aspires to enable people to virtually adopt homeless people and rescue animals through the use of NFTs. These funds would help support and conserve both the animals and their habitat, while giving a sense of pride and ownership to the purchasers of NFTs.

LONG-TERM FOCUS

As the team that creates a charity-based platform, we advocate for transparent and secure transactions directly to trusted animal shelters, conservation, and charities. Blockchain technology was initially created to make fully safe transactions that are well secured from hackers.

Our vision is to have an impact on all things involving donations, not just for animal shelters, conservation, and charities. From causes hosted by big organizations for nature to individuals needing donations, we hope to make it easier and more transparent for everyone involved.

FEATURES OF THE PAWZ TOKEN 2.0

NFT Marketplace

PAWZ will launch its NFT marketplace, and it will also be available on the PAWZ application, and the PAWZ token will be used as a means of payment. It stores your personal and payment data securely on the significant exchanges used by PAWZ, so you never have to share it with anyone not even PAWZ. That implies there will be no more data breaches because firms will no longer be required to store your information. You may utilize the marketplace services to make meeting up with other users easier by displaying the nearest and most reasonable offers to satisfy your cravings and making payments without having to worry about your privacy or security. Also, when the PAWZ NFT marketplace becomes profitable, some portion of sales will go to charities or partners.

PAWZ Wallet

For users and charity organizations, PAWZ Wallet will be a single, secure sign-on for payment, login, and easy payment wallet application.

With the forthcoming PAWZ wallet features, PAWZ users will be able to donate directly to verified charity companies' wallets.

Companies and charitable organizations will be able to advertise on our platform, which will provide huge increases in conversions and income with a lower cost of acquisition.

Game Features

By introducing our unique game features, which will also incorporate the NFT Marketplace, users will be able to utilize the PAWZ token as the game currency while having unlimited access to all the amazing game features.

Token Structure

To ensure the viability of the project over the long term, a small portion of each transaction goes into the longevity and stability of the project:

The following text highlights details of the PAWZ token, use cases, benefits, and issuance terms.

Issuance Terms

PAWZ tokens will be issued on the Binance Smart Chain using the ticker symbol "PAWZ."

USER FLOW AND DESIGN

The PAWZ donation platform will be one of the most user-friendly platforms with unique customized features. The PAWZ platform will have a very friendly, user-friendly interface and will be available for PC and Android/iOS download.

Our platform is safe and secure. We don't hold your money. The PAWZ platform prevents donors from wondering what charity organization to donate to. PAWZ offers a trusted and secure platform to meet the needs of both donors and charity organization.

TEAM

To begin with, we bring diverse talents from large companies down to startups that include high tech, finance, charity services, and marketing. Within the startup community, it is a well-known fact that roughly 65% of new business ventures fail because of "people" problems.

Creating a competent team is the most crucial step towards a better way to spend, save, and provide help to people who really need it.

We have put together an experienced management team with a wide range of expertise and talents. These experts include specialists in cryptocurrency. Our experts also have experience in Blockchain and peer-to-peer technologies, payment processing, artificial intelligence, and cyber threat security management. PAWZ has provided the best team to help our new users thrive as they partner with us, enjoying a reliable, transparent, high-security platform and 24/7 support.

RISK FACTORS

Token generation events and initial coin offerings are often targeted by hackers and bad actors. Hackers may attempt to

interfere with the Purchaser's digital wallet (the "Purchaser's Wallet") or the availability of tokens in any number of ways,

including, without limitation, denial of service attacks, Sybil attacks, spoofing, smurfing, malware attacks, or consensus-based attacks. Any such attack may result in the theft of a purchaser's tokens.

Tokens purchased by a purchaser may be held by the purchaser in the purchaser's wallet or vault, which requires a private key, or a combination of private keys, for access. As a result, the purchaser's tokens will be lost if the required private key(s) associated with the purchaser's wallet or vault storing the tokens are lost. Furthermore, any third party who obtains access to such private key(s), including access to

login credentials of a hosted wallet or vault service used by the purchaser, may be able to misappropriate the purchaser's tokens. The company is not responsible for and shall be held harmless in respect of any such losses. The token smart contract concept, the underlying software application and software platform (i.e., the Binance Smart Chain) are still unproven. There are no representations or warranties that the process for creating the tokens will be uninterrupted or error-free. There is an inherent risk that the software could contain weaknesses, vulnerabilities, or bugs, causing, inter alia, the

CONCLUSION

The goals of PAWZ Token are as follows:

To create an ecosystem in which revenue can be generated for charities independent of liquidating large amounts of tokens so that holders can remain unscathed through donations.

- ✓ To build a centralized platform that helps streamline donations towards animal shelters, conservation, and charities while

ensuring the organizations' authenticity.

- ✓ Build a well-secured platform that helps eradicate fraudulent charity organizations.
- ✓ To maintain the user's ease of use and speed as a centralized exchange efficient, secure, and fully user-controlled, with the processing power and user experience of the current centralized system.
